

## Top Ten List-September

1. September 15<sup>th</sup> is the prime target date for **seeding a lawn**. Because of warm soil, warm water, cool nights and diminishing winds, it is the best time, and the lawn will be thick enough to stop the Winter mud from being tracked inside.
2. **Advantages of Fall Planting:** Still-warm soil holds heat from Summer, so roots begin growth. Winter air minimizes top growth, but roots continue to grow. In Spring, top growth begins as root growth continues. Late Spring warm air spurs up top growth. The large root system is now able to supply the maximum needs of water and nutrients for well-balanced growth.
3. **Stop** dead-heading and pruning your roses until next April 15<sup>th</sup>.
4. **Watch for a hard freeze.** Sprinkler and drip systems can be damaged if the temperature falls below 20 degrees. Drums painted black and filled with water gives off heat through the night to help keep the tomatoes, peppers, and others from freezing. It helps with the frost protection along with cotton sheets or canvas tarps. No plastic-it holds very little heat and blows easily.
5. **Cover your pond** with netting to keep unwanted leaves out.
6. **Bulbs! Bulbs! Bulbs!** Nothing heralds Spring with more fervor than crocus, tulips, daffodils, and hyacinths. Most tulips and daffodils perform at their best for 2 years with good fertilization. After 2 years, most begin to fail, so think about replacing those that look as though blooms are lacking their original luster. Try a new design or color. Work in organics and fertilizer whenever possible because our soil needs it.
7. Before bringing your favorite geraniums and other houseplants inside for the Winter, treat plants coming in from outdoors and other houseplants **with Systemic Houseplant Insect Control** to prevent indoor insect infestation.
8. **Plant Garlic** (California, Giant, Red or Spanish) now for best size next year.
9. Trees and shrubs are changing, so look for **great Fall foliage** for your yard!

10. Plant **ornamental kale and cabbage, pansies and violas** for Fall and Winter color where Summer annuals have begun to look spent. Chase the blahs away even when it snows. **Mums and Asters** are in full swing, so pick some up for you and a friend.
